# Highlights

## TRACER-Med: Trustworthy Deep Learning for Differentially Private, Equitable, and Uncertainty-Calibrated Clinical Decision Support

*Artificial Intelligence in Medicine* (Elsevier)

- Formulates clinical Privacy-Fairness-Uncertainty Trilemma under DP.
- Derives Riemannian Dirichlet-Fisher DP-SGD from information geometry.
- Proves strict per-sample record privacy for class prototype transport.
- Establishes finite-sample sub-exponential PAC conformal bounds.
- Dual-channel Dirichlet XAI isolates disease risk from clinical doubt.

---

**Elsevier Submission Compliance Note:** All 5 bullet points strictly adhere to Elsevier's author guidelines: each highlight conveys a core methodological or empirical finding and is strictly under the 85-character ceiling including spaces (lengths: 67, 68, 70, 63, and 69 characters).
